PROFILE

Functional Analyst / Solutions Engineer who sits inside enterprise deployments end-to-end: I take an unclear business problem from a client, design the solution, and build it myself alongside the client's and the delivery team's engineers through to production. Comfortable owning open-ended, high-stakes problems with little structure around them, across unfamiliar business domains.

EXPERIENCE

Functional Analyst / Solutions Engineer

Apr 2025 – Present

Aeroterra — Buenos Aires. Enterprise projects for clients in energy, government and public safety.

- Clients under NDA; scope, volumes and names are not disclosed.
- First point of contact between the client and the development teams: I gather and analyze requirements, design the solution, share the approved design with developers and analysts, and work with them through to production.
- For an oil & gas client's field-operations platform: designed a 3-level relational data model (report → event → follow-up) and a standalone inspection module, personally configured the field-facing application end-to-end, and the development team built the separate monitoring applications on that same model — one design held two independent implementations.
- Integrated and normalized data from heterogeneous sources (KML, PDF, field forms) into production solutions.
- Analyzed and tested REST APIs and services with Postman to validate integrations between systems, and documented expected behavior.
- Present solutions to clients and run demos and proofs of concept on the platform.

PROJECTS

- **InvGate → Jira parser** — Tool that extracts ITSM ticket data from PDF exports and converts it into Jira-ready user stories with acceptance criteria. Built with Claude Code.
- **Vaquitapp** — Shared-expenses app with a full auth module: registration, login, refresh-token rotation and route-protection middleware. Node.js, TypeScript, Express, Prisma, PostgreSQL, Docker.

SKILLS

Solution design: solution architecture, relational data modeling, data integration and normalization, client presentations, demos and proofs of concept

Functional analysis: requirements gathering, user stories and acceptance criteria, use cases, UML, process design and documentation

Development: Python, JavaScript, TypeScript, SQL · React, Next.js · Node.js, Express, FastAPI · Prisma · Git, Docker

APIs & data: REST APIs, JSON, Postman, Swagger/OpenAPI, PostgreSQL

Platforms: ArcGIS Enterprise (Survey123, Field Maps, Dashboards, Experience Builder, Web Maps)

Ways of working: Agile, Jira, Claude and Claude Code for requirements analysis, documentation and prototyping, communication with technical and non-technical stakeholders

EDUCATION & LANGUAGES

Técnico Universitario en Programación de Sistemas (University Technician in Systems Programming) · 2023 – 2024

Spanish (native) · Professional English (CILE 3, UBA)
